Step 1: After clicking the **Upgrade** button in plugin you will redirected to the miniOrange login page. Enter your credentials. It will take you the payment section. Make payment based on your requirement and then after payment follow the steps given below.

Step 2: After completing the payment it will upgrade your account to premium and show details of your plan.
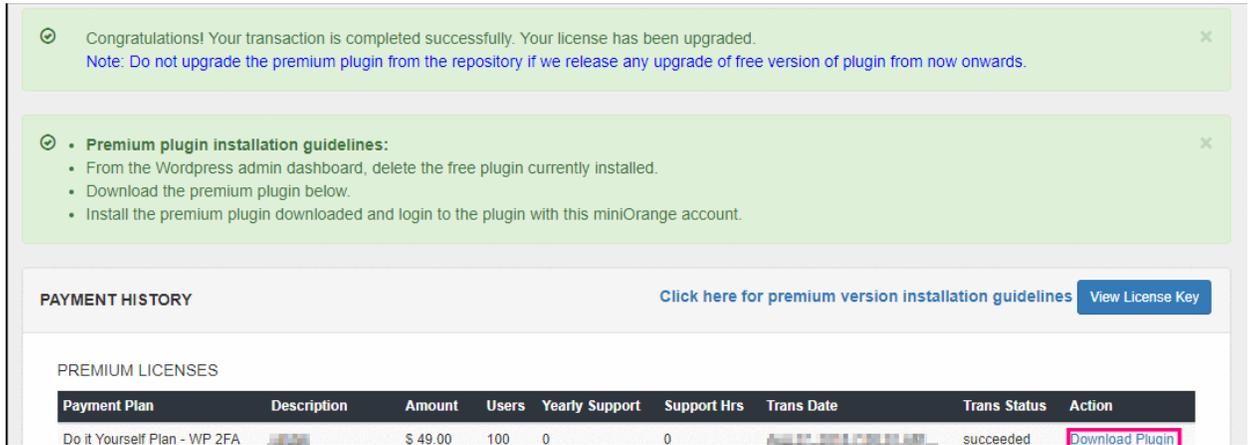

Step 3: Click on download option which is shown in above red circle. After downloading go to wordpress admin dashboard and delete the free plugin.
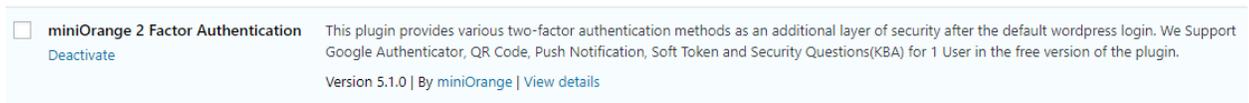

Step 4: After that click on Add New button in wordpress dashboard.

Step 5: After clicking Add New you get the following screen.

Step 6: Click on Upload Plugin it will show following screen.
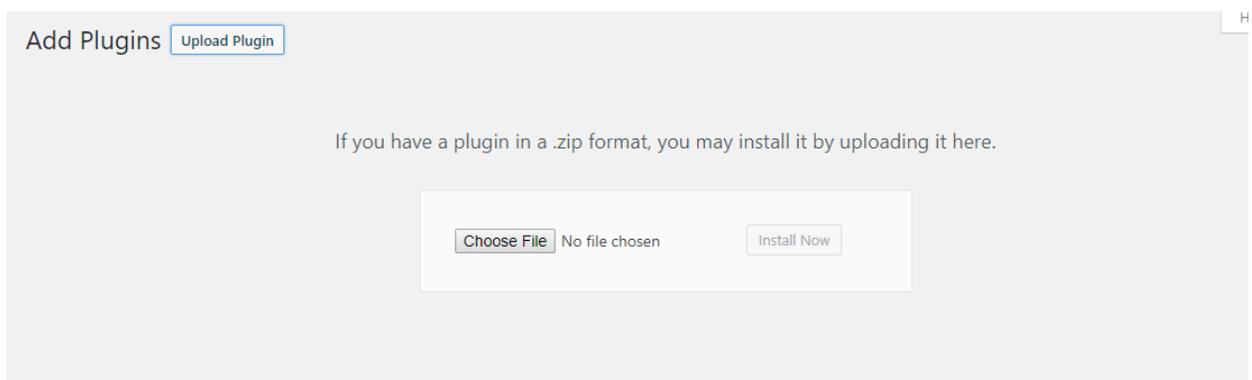

Step 7: Choose the file which you have downloaded after making payment and click on **Install Now** button and then it will show the following screen.

Step 8: Click on Activate Plugin button It will activate the Standard/Premium plugin and then click the miniOrange 2-Factor on wordpress sidebar and then you login with your same credentials which you made payment.
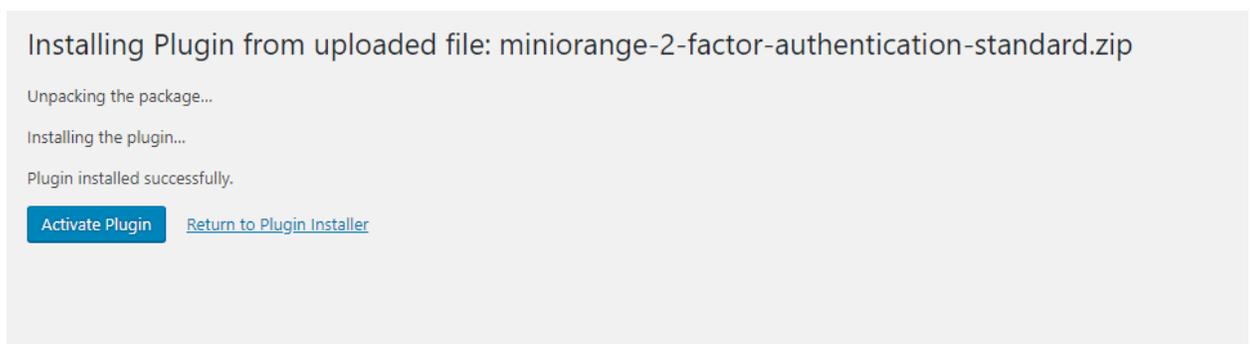

Step 9: If you have **premium plugin** then by default two factor will be invoked for users during login. If you don't want to enable two factor during login you can select **Skip 2 Factor registration at login**. If **Enforce 2 Factor registration for Users at login time** is not selected then users will have to enable two factor as shown in step 10.

Invoke Inline Registration to setup 2nd factor for users.

○ Enforce 2 Factor registration for users at login time.   ○ Skip 2 Factor registration at login.

Note: If this option is enabled then users have to setup their two-factor account forcefully during their login. By selecting second option, you will provide your users to skip their two-factor setup during login.

Step 10: If you are a **Standard** customer then your users can click on miniOrange 2-Factor plugin icon in wordpress dashboard. When users click on it then it will show the following screen to setup Two factor.

| Account Setup | Setup Two-Factor | How To Setup |

A new security system has been enabled to better protect your account. Please configure your Two-Factor Authentication method by setting up your account.
